Benjamín Ayala

Systems Analyst | **Full Stack Developer** | React · Node.js · TypeScript · PostgreSQL
Entre Ríos, Argentina
benjamin.ayala.dev@gmail.com in/benjamin-ayala github/benjaminayala0 benjaminayala.dev

Professional Profile

Systems Analyst with a **comprehensive vision** of software development and experience in creating **end-to-end** digital products. I possess a solid technical foundation to design **scalable architectures**, manage **relational databases**, and **deploy** functional solutions **into production**. I stand out for my **learning agility** to adopt new technologies, my adaptability to diverse work environments, and a focus oriented towards **solving real business problems** through software. Open to remote, hybrid, or on-site opportunities. I am comfortable with Agile workflows and committed to quality throughout every stage of the software development lifecycle.

Experience

Full Stack Mobile Developer — VisuBook SaaS Booking & CRM (Freelance) **Dec. 2025 – Present**
Multiplatform iOS/Android *Remote*

- **Architecture & Scalability:** Designed and implemented a **modular RESTful API (Node.js/Express)** with **over 25 endpoints**, following a **Multi-tenant** scheme prepared to support multiple independent businesses with secure JWT authentication.
- **Business Logic Optimization:** Developed real-time time-slot validation algorithms on **PostgreSQL**, achieving 100% elimination of schedule overlaps and improving data integrity.
- **User Impact:** Developed an automated local push notification system (Expo) triggered upon appointment booking, focused on mitigating no-shows and streamlining direct client communication.
- **Technical Differentiation:** Built a multimedia CRM module with **Cloudinary** integration for visual process tracking, differentiating the product from generic market solutions.
- **Security & Standards:** Implemented protections based on **OWASP** standards (Helmet, rate-limiting, bcrypt), ensuring the security of sensitive client information.

Full Stack Developer — Mate Único E-commerce & CMS **Aug. 2025 – Dec. 2025**
Degree Final Project — Systems Analyst *Entre Ríos, Argentina*

- **Headless Architecture:** Designed and implemented a decoupled architecture (React + Node.js) using Strapi as a CMS, allowing for independent scalability and dynamic, efficient content management.
- **Payment Automation:** Integrated the Mercado Pago payment gateway (**Checkout Pro & Webhooks**), achieving real-time sales reconciliation and completely eliminating manual intervention in the payment flow.
- **API Optimization (Caching):** Implemented in-memory caching **(Node-Cache with Cache-Aside pattern)** for the product catalog, significantly reducing database load and drastically accelerating response times..
- **Agile Delivery):** Structured the software development lifecycle (SDLC) through agile iterations, successfully deploying the functional MVP one week ahead of the established deadline.
- **Quality & Documentation:** Validated critical flows (Auth and Checkout) via API testing using Postman. Developed architecture schemas, UML diagrams, and use cases to ensure code maintainability.

Education

UADER – Faculty of Science and Technology **Feb. 2023 – Present**
Systems Analyst (Graduated Dec. 2025)

Bachelor's Degree in Information Systems (In progress, est. Dec. 2027)

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL, Python, HTML5, CSS3
Frontend: React, React Native, Expo, Vite, TailwindCSS
Backend: Node.js, Express.js, Strapi CMS, REST APIs, Layered Architecture (MVC)
Databases: PostgreSQL, Sequelize ORM, Relational Schema Design (ERD), Query Optimization
Security: JWT, bcrypt, Rate Limiting, Helmet, OAuth 2.0
DevOps & Tools: Git, GitHub, Docker, Postman, Figma, Agile Methodologies, UML, Technical Writing
Languages: Spanish (Native), English (Technical/Conversational)

Certifications

LinkedIn Learning **Jan. 2026**
React Essential *Remote*
Cisco Networking Academy **Nov. 2025**
Certification: Networking Technician *Remote*
